Unit 1
Task 1

Introduction

In this assessment, you will work on one or more exercises that you must complete in the assigned system. Please make sure to read the instructions below carefully before accessing the system.

Before starting:

- Ensure your browser is up to date and clear your browser cache and cookies.
- Make sure to close all browser sessions before you start the assessment and remember not to open unnecessary tabs or windows while working on the exercises.

During the assessment:

- Ensure you follow the assessment instructions precisely. Any deviation may result in failure of the exercise.
- Avoid access to any other practical systems during the assessment in any other browser session (including incognito).
- If you accidentally close the assessment browser, go back to learning.sap.com, log in again, and go back to the assessment.
- Should you encounter technical difficulties with the assessment, please refer to the FAQs or create a case with the support team.

Ending the assessment

- Select the *Confirm completion* button to submit your assessment. This button is in the browser tab where you initially accessed the assessment, and not in the system tab.
- Once you submit the assessment, you can no longer make changes. Do not attempt to access the system again once you have submitted your assessment.
- To get the result of your assessment, please wait for the validation process to complete (approximately 15 minutes). Your result (failed/passed) will be displayed under *My Certifications*. Click on your profile icon in the top-right corner of learning.sap.com and select *My Certifications*.

Good luck with your assessment!

Unit 1
Task 2

Context and Preparations

Introduction Scenario and Hints

In this practical exam, you will follow the fictional Bike Company, a manufacturer of high-quality bicycles. The company leverages SAP S/4HANA Private Cloud to manage and optimize its financial accounting processes.

Caution:
Your group number is the unique identifier of your user and actions in the system. Anywhere you see the ## symbol in exercise instructions, always replace this with your group number.

To find your group number, click on the windows start button in your remote desktop and in the menu select expand, as shown in the screen below:

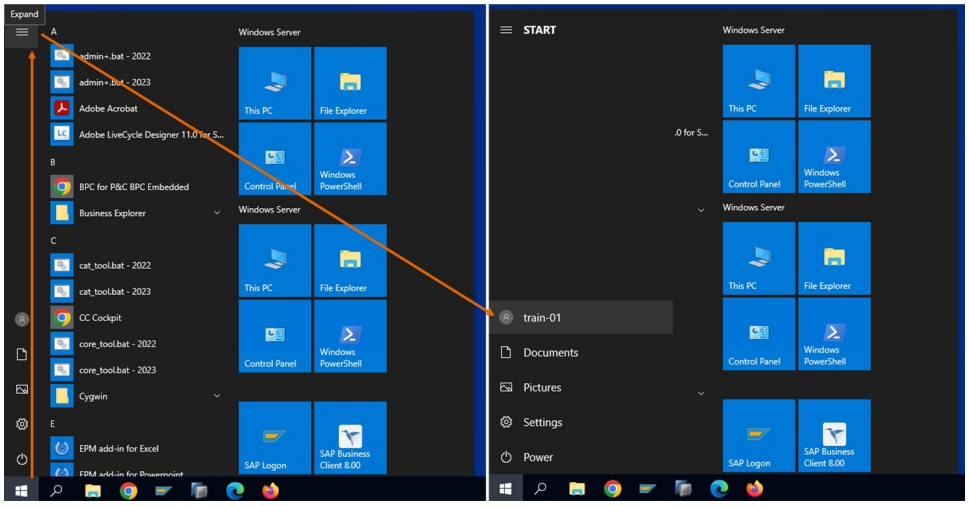

Figure 1: Group Number

Your group number is equal to the two digits after *train-*, in the example above, the group number is **01**.

The group number you should use in the task instructions (marked as ## in the instructions) is equal to the last 2 digits of your user TS4FI-**##**.

Please note that you are allowed and invited to use different knowledge resources in this exam, such as the SAP Help Portal or Joule for Consultants.

In addition, please note that we recommend approximately 20-25 minutes of processing time for each exercise and that you adhere exactly to the defined names and parameters in the exercises. Tasks are validated based on these requirements, and if they are not met, tasks cannot be validated as passed successfully.

Simulate and review your journal entries before posting!

After posting, some objects validated by SAP during the exam cannot be changed.

© Copyright. All rights reserved.

If parameters are not explicitly specified in the task or can be accessed from the context, these can be chosen freely (e.g., the name of a business partner).

Note:
In all exam tasks, if you see ## in the text, replace these characters with your assigned group number.

Additional guidance for working on the exercises:

- You may work on the tasks in any order.
- Within a given task, the individual task steps often build on each other.
- Before you start implementing, read each task completely to understand all requirements and constraints of the exercise.
- For each task, pay close attention to the required company code.

1. You can access SAP Fiori by searching for "T41" in the Windows Start menu. Please note that Fiori Spaces are not activated, but feel free to do so for your user.
2. In the SAP GUI or SAP Fiori, use user *TS4FI-##* and password *Welcome1*.

Unit 1
Task 3

Create a new Document Type

Bike Company is implementing a new system to streamline road toll invoicing for its employees' car fleet.

This involves integrating the RTA - Road Transit Authority's interface with the SAP system to automatically load the toll charges. Using the original numbers from the RTA billing system will facilitate reconciliation and traceability.

A specific document type will be created to support this process, and the Road Transit Authority will be established as a vendor to ensure comprehensive testing and seamless operation. This initiative aims to enhance overall efficiency and accuracy in managing road tolls, benefiting both the company and its employees.

1. Create a new document type for company code TA## to exclusively support toll fees interfaced from RTA – Road Transit Authority. Its code should be ## and the description 'Toll Fees ##'. In case of erroneous posting, the reversal should use the existing document type AB. As the upload interface is not ready yet, manual input with this document type should be temporarily authorized. When finalized, the interface is expected to complete the Document Header Text field with ##.

2. For the current year, the Road Transit Authority is issuing billing documents to all its customers with a numbering sequence between FEES##0000 and FEES##9999. This numbering is modified every year. The Bike Company wishes to reuse the RTA billing document number as its own document number in SAP. Check the existing number range numbers and use the next available position in the sequence A1, A2, A3.....A9, B1,B2...Z9 to create a new number range supporting these requirements.

   Finally, classify your new document type ## for document splitting: Use similar settings to the KR document type.

3. Create a new supplier with the ID: RTA##, the name: Road Transit Authority ##, the address: SAP St. ##, 10117 Berlin, Germany. Use the grouping: ‘BPAB - Ext. Alpha num‘ and the role: 'FLVN00 - FI Vendor'. The AP G/L reconciliation account is '21100000 Trade Payables domestic'. The standard payment conditions: 0003 should be applied automatically to all invoices of RTA.

   To facilitate payment reconciliations, the Bike Company requires the Assignment field of the RTA invoices to be automatically populated with data under the format "Pstng yr,month,curr.".

4. Once the configuration is completed, it needs to be tested: Find the app 'Create Incoming Invoices. Then, use the new document type ## to post an invoice from RTA, number: FEES##7788, for an amount of 500 Euro plus 10% VAT, dated from today. The offsetting G/L account is 61005000 - Travel Expenses - Ground Transportation and the Cost Center: TA##1100. If you are prompted to enter the document header text, please enter ##.

Unit 1
Task 4

Closing Operations – Perform Value Adjustments for Overdue Receivables

Business Scenario

To properly account for risks from doubtful receivables, Bike Company applies a flat-rate individual value adjustment at the end of each period.

In doing so, the company ensures that the expected loss on overdue receivables is accurately reflected on the balance sheet, and that legal requirements are met.

A recent market analysis has revealed increased credit risk for a specific customer segment: small, independent bike retailers. To address this risk, management has decided to implement special valuation rules for this customer group. All other customers will continue to be subject to the existing valuation rules.

Your task is to enter these new valuation rules into the system and then perform the flat-rate individual value adjustment for the outstanding receivables at the end of the previous fiscal year.

1. **Create a new Value Adjustment Key**

   The new management requirements must be configured in the system before executing the valuation run for the flat-rate individual value adjustment.

   Set up a new value adjustment key for the flat-rate individual value adjustment in the system, following these management guidelines:

   - Value Adjustment Key: ##
   - For receivables at least 30 days overdue, apply a flat-rate value adjustment of 10%.
   - For receivables at least 60 days overdue, apply a flat-rate value adjustment of 20%.

   Note:
   Valuation Area:

   The percentages **must be defined for the existing valuation area linked to Ledger 0L** in company code TA##.

   Please make a note of this valuation area. You will need it for the subsequent valuation run.

   Calculation Base:

   Make sure that the calculation of the value adjustment is based on posted net amounts.

2. **Create a new Business Partner**

© Copyright. All rights reserved.

To test the valuation rules from step 1, create a new business partner with the number **TS4FI##**. This partner represents a small, independent bike retailer. Set it up as a customer in company code TA##.

By properly preparing the business partner master data, you ensure that the new, stricter rules for flat-rate individual value adjustment are automatically applied only for this customer in the next valuation run.

Note:

- Create the new business partner **TS4FI##** in company code TA## by copying the existing Business Partner T-AC##. Use the app *Manage Business Partner Master Data* for this step.
- Choose **Bike Retailer ##** as *Last Name*.
- Copy all other general master data unchanged from the template customer T-AC##.

3. **Post two Customer Invoices**

Post customer invoices to establish the data foundation for the upcoming valuation run, testing the new percentages outlined in step 1.

Post two overdue invoices for your new customer TS4FI##, in company code TA##. Use revenue account 41000500 as the offsetting account.

Invoice 1:

- Dates: Select **November 15th of the previous year** for both the posting and invoice date.
- Amount: 11,000 EUR gross
- Tax Code: 1O (10% Output Tax (Training))

Invoice 2:

- Dates: Select **September 15th of the previous year** for both the posting and invoice date.
- Amount: 11,000 EUR gross
- Tax Code: 1O (10% Output Tax (Training))

Note:
Please record the two document numbers. You will need them for the subsequent valuation run.

Ensure the invoices are entered exactly as specified.

4. **Perform the Valuation Run**

After setting up the new valuation rules and creating the test data in the previous steps, you will perform the flat-rate individual value adjustment run.

To do this, open the app *Perform Further Valuations*.

© Copyright. All rights reserved.

Execute the valuation run using the following parameters:

Field Name	Values
Run On and Key Date:	**31.12. previous year**
Identification:	**##**
Val. Method:	**3 - flat-rate individual value adjustment**
Valuation Area:	**The valuation area used in step 1**
Posting Date:	**31.12. previous year**
Reversal Posting Date:	**01.01. current year**
Document Type:	**SA**
Company Code:	**TA##**

Note:
Limit the run specifically to the two invoices posted in step 3 for your customer TS4FI##.

Verification and Posting:

Before you execute the postings, display the results list. Verify that the run proposes the correct value adjustments based on your value adjustment key ## settings. After successful verification, execute the run to post the value adjustment documents.

Unit 1
Task 5

Create a House Bank, Configure and Execute a Payment Run

The Bike Company is currently optimizing its internal payment processes to ensure smoother and more reliable transactions with its business partners. In recent months, there have been some irregularities in the payment behavior toward one of the partners, prompting the finance department to tighten control over payment execution.

As part of this improvement, internal processes around bank management, invoice handling, and payment prioritization are being reviewed and adjusted to better align with operational needs — while ensuring flexibility and compliance with financial policies.

1. Create a new bank in the system using the information from the table and define this bank as your house bank for the given company code.

Field Name	Values
Country/ region code:	**DE**
Bank key:	**333333##**
SWIFT/ BIC:	**YYYYDE##**
Name:	**Bank DE ##**
Company code:	**TA##**
House bank ID:	**D-B##**

Once the house bank is established, proceed to create a bank account with the information from the table below. Make sure that all necessary settings are in place for this bank account to be eligible for SEPA transfers.

Field Name	Values
Account type:	**01 (Current Account)**
Account description:	**Current German Account EUR**
Account number:	**44444##**
Bank key:	**333333##**
Currency:	**EUR**
Account holder:	**German AH ##**

After successfully creating the account, assign it to the newly created house bank **D-B##** for company code **TA##**, using the house bank account ID **GIRO**, and linking it to the G/L account **11001000**. Ensure all assignments are correctly integrated and maintained for proper bank accounting and payment processing.

© Copyright. All rights reserved.

2. Please use the app *Create Incoming Invoices* to create a vendor invoice for the vendor **T-AV##**. Due to some discrepancies in the vendor's payment behavior over the past few months, apply a payment block to this invoice.

Field Name	Values
Supplier:	**T-AV##**
Company code:	**TA##**
Amount:	**3,300 EUR**
Invoice date:	**current date**
Posting date:	**current date**
Tax code:	**1I (10% Input Tax (Training)**
Calculate Tax:	**yes**
Payment terms:	**0001**
Payment block:	**A**
G/L account:	**61003000**
Cost center:	**TA##1100**

3. To optimize the handling of incoming and outgoing payments using the payment program, you need to verify and, if necessary, update the relevant settings in Customizing. Make sure that both the Sending and Paying Company Code are set to your company code **TA##**.

   Use the data in the following table to configure the bank determination settings for your paying company code TA## and your newly created house bank **D-B##**:

Field Name/Data Type	Value
Ranking Order	
Payment method (PM)	**T**
Currency	**EUR**
Rank.Order	**1**
House Bk	**D-B##** (change the current setting)
Bank Accounts	
House bank	**D-B##**
Payment Method	**T**
Currency	**EUR**
Account ID	**GIRO**
Bank Subaccount	**11001020**

   For this house bank account (D-B## / GIRO) define the available amounts for both "Available for Outgoing Payment" and "Scheduled Incoming Payment" as **2,000,000 EUR**. The time period for availability can be ignored by entering **999** in the Days field.

© Copyright. All rights reserved.

At the same time, set up an Amount Limit of **1,000,000 EUR** for the house bank account and define "Days to Value Date" as **2 days**.

You do not need to configure any settings for generating the payment medium file.

4. Due to recent updates regarding the vendor's payment behavior, the invoice created in step 2 should now be included in the next payment run. To achieve this, you need to execute the payment program (Fiori app *Manage Automatic Payments*) and take the necessary steps to ensure that the blocked invoice is picked up during processing. The changes made to unblock the invoice should only apply to this payment run and should not be saved in the master data. When setting up the payment run, use the following parameters:

Field Name	Values
Run Date:	**current date**
Identification:	**TA##**
Posting Date:	**current date**
Docs. Entered Up To:	**current date**
Company Code:	**TA##**
Next Payment Date:	**current date +7 days**
Payment Method:	**T for SEPA Credit Transfer**
Supplier:	**T-AV##**

For better analysis and troubleshooting, activate the *Additional Log* by selecting **Yes** during the payment run setup.

Please note: Once the payment run has been executed, changes to the invoice are no longer possible. Therefore, ensure all necessary adjustments are completed before executing the payment run.

Unit 1
Task 6

Asset Accounting – Perform Customizing, Acquisition, and Depreciation Postings

The Bike Company subsidiary TA## is purchasing an office building to house its expanding operations. Currently, fixed asset accounting is not set up for the subsidiary. It has been decided that the chart of depreciation, Z000, is to be used as the source. All other settings will be the same as company code 1010.

You need to configure the company code TA## for asset accounting and post a fixed asset acquisition for the new office building. Following the acquisition, you will also run depreciation for the first month of this year.

1. Configure the company code for asset accounting, using Z000 as the source for the chart of depreciation for company code TA##. All other settings should be the same as company code 1010. Be sure to configure the general company code settings with the highest fiscal year as the current year and the account assignment objects for Controlling integration.
2. Post a non-integrated acquisition for your office building with the date set to January 1st of the current year. The value should be 500000 EUR. Cost Center TA##1100 is responsible for the office building.
3. Run asset depreciation for company code TA## for January (Period 01) of the current year.

© Copyright. All rights reserved.

Unit 1
Task 7

Establish a New Company Code

The Bike's company, as a subsidiary within a larger corporate group, is implementing a strategic initiative to enhance its financial management infrastructure. This involves setting up a new company code, organizing general ledger accounts, establishing number ranges, posting financial documents, and managing document reversal processes to optimize accounting procedures.

1. Create a company code (GR##) using Company code 1010 as the source. Make sure that EUR is the currency, designating the country as DE (Germany) and the language as EN (English). Also copy the G/L accounts from Company Code 1010. These settings ensure accurate configuration aligned with regional and linguistic specifications.
2. In order to more properly organize the General Ledger accounts, it has been decided to create a new account group AE## tailored to financial reporting requirements. Establish a new non-operating income or expense G/L account within the account group (AE##) to facilitate diverse financial transactions and provide clearer insights into the company's financial status. The number range for these accounts should be AE##0000 – AE##9999, ensuring accurate tracking and management of all financial activities.
3. Test your new configuration by posting a general journal entry in company code GR## using the newly created G/L account. Use G/L account 10010000 (Petty Cash) as the offsetting account. Post the document on the current date (Journal entry date and posting date). Choose an amount of your choice.
4. Execute a reversal of the document created on the previous step 10 days after the original posting.
